5. Notices

5.1 Please guarantee that the capacitors are operated under specified conditions, including the proper temperature, voltage and current, as over-voltage and over-current may shorten the life of the capacitor;

5.2 Please pay attention to the points following when the capacitor is shuntly connected in the system

- a. For the system of current regulating system and the electric equipments system, the capacitor should not be directly connected;
- b. Operational current of the capacitor should be less than the off-load current of the shuntly connected motor;
- c. When the transformer is off-load, the capacitor should stop operating.

5.3 Specific switches, contactors and over-current relays should be adopted when the capacitor is shuntly connected in the system.
